Known Issues and Limitations.....	17
Disclaimer and Legal Information	18

Introduction

This document provides system requirements, installation instructions, limitations, and legal information for the Intel® Software Guard Extensions (Intel® SGX) Platform Software (PSW).

Product Contents

The Intel® Software Guard Extensions PSW package includes:

- Intel® SGX Architecture Enclaves
- Intel® SGX Runtime System Library
- Intel® SGX Architecture Enclave Service Manager (AESM)

What's New (in version 2.30.101.1)

- Intel® SGX Architecture Enclave Service Manager (AESM)
 - Restored `InitQuoteEx` IPC compatibility ([#1107](#)) — v2.30 marked `buf_size` as required in the `InitQuoteExRequest` schema, rejecting requests from pre-v2.30 clients that omit `buf_size` when `b_pub_key_id=false`. This patch restores `buf_size` to optional and accepts its absence when `b_pub_key_id` is not set.

NOTE

Announcement: upcoming changes planned for the next release

Repository layout change

1. The AESM codebase (`/psw` directory and supporting build/packaging infrastructure) will be moved to a standalone GitHub repository. The SGX repository will reference it via a Git submodule.

This is a source-code layout change only. Binary deliverables, APIs, and packaging are unaffected by this change — if you consume the released binaries or distribution packages, no action is required. If you build from source, clone recursively (`--recurse-submodules`) to pull the relocated sources.

Retirements

1. SGX SDK will no longer support the non-default OpenSSL/SGXSSL crypto build option.
2. The alternative single `.spec` file RPM packaging targets (`psw-dcap` and `psw-tdx` files, together with supporting `Makefile.psw_dcap` and `Makefile.psw_tdx`) will be removed because they are unused by Intel official RPM packaging and are not actively maintained.

Changes in Previous Releases

Version 2.30.100.1

- Intel® SGX Architecture Enclave Service Manager (AESM)
 - Hardened socket receive path — validates IPC message length before payload read and enforces a finite client socket timeout to prevent indefinite blocking.
 - Strengthened IPC request parsing with strict `protobuf` dispatch validation and per-request semantic checks for attestation messages.
 - `write_callback()`: fixed an integer overflow.
- Intel® SGX Runtime System Library
 - Added Intel TDX service TD extension fields (`tdx_servtd_ext_t` structure in `sgx_quote_5.h`) to support parsing the SERVTD binding information carried in TDX quotes.
 - Fixed an out-of-bounds write in the ELF parser (`parse_dyn`) when processing OS-specific address-range dynamic tags.
 - Extracted `uRTS`, `libsgx-enclave-common`, and `libsgx-headers` into a new standalone `sgx-enclave-runtime` RPM meta-package, splitting them out of the `psw-dcap/psw-tdx` specs.
- Intel® SGX Architecture Enclaves
 - Updated the SGX Enclave Memory Manager (`emm_src`) to fix a coexistence bug between EDMM and AEX Notify.
 - PCE ISVSVN bumped to 0x11.
- Other changes
 - Intel SGX SDK source code (including samples) as well as the SGX enclave runtime libraries now reside at [intel/confidential-computing.sgx.sdk](https://github.com/intel/confidential-computing.sgx.sdk) and is referenced as a submodule from [intel/confidential-computing.sgx](https://github.com/intel/confidential-computing.sgx).
 - Removed build scripts and Docker stages for the long-obsolete PSW .bin binary installer. The PSW has been delivered exclusively via DEB/RPM packages since 2019; the replacement is the `{deb|rpm}_psw_aesm_pkg` target.
 - Improved RPM packaging tooling: unified debug subpackage suppression across old and new RPM versions; added Debian* trixie to the local repository distributions configuration.
 - Updated supported operating systems:
 - Added Red Hat* Enterprise Linux* Server 9.6, 9.8, 10.0, and 10.2; removed 9.4.
 - Updated SUSE* Linux Enterprise Server support to 15 SP7 and 16; removed 15.6.
 - Added Debian* 13.

Version 2.29.100.1

- Added Ubuntu* 26.04 support and enabled CMake 4+ support.
- Security hardening: added compiler and linker security flags across `buildenv.mk` and all component `Makefiles`.
- Bug fixes.

Version 2.28.100.1

- Removed deprecated functionality based on EPID (Enhanced Privacy ID), including EPID remote attestation.
 - The `libsgx_epid.so` library is removed, including its simulation counterpart in the SGX SDK.
 - Note support remains for ECDSA-based attestation and universal quoting APIs (i.e. `sgx_get_quote_ex()`).
- Removed code supporting the deprecated Launch Enclave, whitelist management, and "out-of-tree" driver.
 - The recommended launch mechanism continues to be the Flexible Launch Control via the in-kernel SGX driver.
 - The `libsgx_launch.so` library is removed, including its simulation counterpart in the SGX SDK.
 - The ``libsgx-aesm-launch-plugin`` as well as the ``le_launch_service_bundle`` are removed.
- Supporting architectural enclaves: Launch Enclave (LE), EPID-based Provisioning Enclave (PVE), EPID-based Quoting Enclave (QE) are no longer distributed. Launch whitelist files (`white_list_cert*.bin`) and signature files (`le_prod_css.bin`) are removed as well.
- Added support for CentOS* Stream 10 and Red Hat* Enterprise Linux* 10.
- Upgraded to OpenSSL 3.0.19.
- Bug fixes.

Version 2.27.100.1

- Added support for Azure Linux 3.0, Debian 12 and Anolis 8.10.
- Improved logging output.
- Bug fixes.

Version 2.26.100.1

- Added support for Red Hat* Enterprise Linux* Server 9.4 (for x86_64) and SUSE* Linux* Enterprise Server 15.6 64-bits.

- Added support for the FIPS 140-3 Certifiable QVE (Quote Verification Enclave) **as an experimental feature**.
- Fixed bugs

Version 2.25.100.3

- Upgraded Intel® Integrated Performance Primitives (IPP) Cryptography library to version 2021.12.1
- Upgraded Intel® SGX Architecture Enclaves based on new IPP crypto library
- Upgraded Intel® DCAP Quote Verification Enclave to integrate OpenSSL/SgxSSL 3.0.14
- Removed Intel® DCAP PCCS from repository
- Added Ubuntu* 24.04 LTS 64-bit Server support
- Fixed bugs

Note that PCCS is not available in this release. Please follow DCAP installation guide to use 'PCSCClientTool' to retrieve the attestation collaterals or use old version PCCS.

Version 2.24.100.3

- Upgraded Intel® DCAP Ring3 Abstraction Layer (R3AAL) library to support ConfigFS-TSM as communication channel between host and guest for TDX remote attestation
- Upgraded Intel® DCAP Quote Verification Enclave to integrate OpenSSL/SgxSSL 3.0.13
- Upgraded new TDX attestation result "TD_RELAUNCH_ADVISED" in Intel® DCAP Quote Verification Library (QVL) and Appraisal Engine
- Fixed bugs

Version 2.23.100.2

- Introduced the Intel® DCAP Appraisal Engine within quote verification library, empowering users to evaluate verification results against diverse policies
- Upgraded Intel® SGX Quote Verification Enclave to integrate OpenSSL/SgxSSL 3.0.12
- Added Rust wrapper for quote provider library APIs
- Fixed bugs

Version 2.22.100.3

- Resigned all Intel® SGX Architecture Enclaves
- Upgraded Intel® SGX Quote Verification Enclave to integrate OpenSSL/SgxSSL 3.0.10
- Added Attestation Library support for Intel(R) TDX Migration TD

- Added Rust wrapper for low-level Quote Generation APIs
- Enabled 'SE_TRACE' log in release binary
- Updated Rust QVL wrapper to use native Rust structure for quote verification collateral
- Added a limitation in the DCAP QVL to only allow the user to set the QvE load policy once
- Fixed bugs

Version 2.21.100.1

- Introduced Intel® TDX 1.4 & 1.5 support
- Upgraded Ring3 Abstraction Layer (R3AAL) library to support Intel® TDX MVP 6.2 kernel
- Enhanced quote verification performance in multi-thread scenarios
- Upgraded Intel® SGX Quote Verification Enclave to integrate latest OpenSSL/SgxSSL 1.1.1u
- Fixed bugs

This is the final release that will support Ubuntu 18.04 LTS. The next release of this software will not include pre-built packages for Ubuntu 18.04 LTS, aligning with Ubuntu's LTS release Standard Support policy.

Version 2.20.100.4

- Applied [CVE-2023-1255](#), [CVE-2023-0465](#), and [CVE-2023-0466](#) patches to SgxSSL/OpenSSL 1.1.1t
- Upgraded Intel® SGX Quote Verification Enclave to integrate updated SgxSSL
- Enhanced the attestation local cache functionality by giving users the option to provide their own cache file
- Enabled QPL/QCNL log in DCAP samples
- Fixed bugs

Note: Reference LE (A reference implementation of Launch Enclave for 'Flexible Launch Control') will be deprecated from this release.

Version 2.19.100.3

- Upgraded Intel® SGX Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1t
- Added new API in quote verification library to extract FMSPC (Family-Model-Stepping-Platform-CustomSKU) value from ECDSA quote
- Added Rust support for SGX ECDSA quote generation
- Added Linux kernel 5.19 support in TDX R3AAL (Ring 3 Attestation Abstraction Layer)
- Removed Protobuf in TDX QGS (Quote Generation Service) and R3AAL (Ring 3 Attestation Abstraction Layer)

- Fixed bugs

Version 2.18.101.1

- Fixed enclave load failure in environments where no symbolic links, `/dev/sgx/{enclave, provision}` are created to point to the default SGX device nodes exported by kernel, `/dev/{sgx_enclave, sgx_provision}`, respectively

Version 2.18.100.3

- Upgraded Intel® SGX Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1q
- Upgraded Intel® SGX QE3 to make it backward compatible
- Improved ECDSA quote generation and verification performance by caching PCK certificates and collaterals in memory and disk drive
- Added Java support for quote verification library
- Added new APIs to unify Intel® SGX and TDX quote verification in Quote Verification Library
- Added Advisory ID in ECDSA quote verification supplemental data
- Added Intel® TDX support in RA-TLS (Remote Attestation based TLS) library
- Improved TDX quote generation throughput in vsock mode
- Added Rust support for TDX quote generation
- Added support for the Linux kernel APIs for the Enclave Dynamic Memory Management (EDMM) features that are available with the Linux kernel v6.0 or later. Refer to the SGX SDK developer reference for details on new trusted APIs and enclave configuration for the EDMM features
- Fixed bugs

The download.01.org directory layout restructuring – Possible Impact

1. Debian repository/packages:
You may continue accessing the Debian repo/packages in the [sgx_repo](#) directory, as suggested in the Linux Installation Guide.
Directly accessing individual Debian packages from the directories listed below is no longer possible:
 - a) From [latest](#) directory
 - b) From a specific release under [sgx-linux](#) directory
 - c) From a specific release under [sgx-dcap](#) directory
2. DCAP tools will be moved to the [distro](#) directory and the [tools](#) directory will be removed. If you access the tools in your project and get a download failure, please update the URL accordingly.

Version 2.17.100.3

- Re-signed all the Intel® SGX Architecture Enclaves (AEs) to address [CVE-2022-21123](#), [CVE-2022-21125](#) and [CVE-2022-21166](#)
- Added Intel® TDX Attestation support
- Added Rust support for ECDSA quote verification
- Upgraded Intel® ECDSA Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1o
- Fixed bugs

Note: There is no official support for some newer Linux distros yet, such as Ubuntu 21.10. But note that newer Linux distros may restrict access to the SGX enclave device node, `"/dev/sgx_enclave"`, to members of the `"sgx"` group. In that case, please add the group to the user ID to run enclave apps using this command: `"usermod -aG sgx <uid>"`

Version 2.16.100.4

- Enhanced QPL (Quote Provider Library) to support caching Intel® PCK (Provisioning Certificate Key) certificate chain in local memory, or retrieving Intel® PCK cert chain from local HTTP/S address
- Upgraded Intel® ECDSA Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1m
- Introduced Intel® ID enclave for QE identity generation
- Fixed bugs

Version 2.15.101.1

- Upgraded Intel® ECDSA Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1l
- Fixed bugs

You can refer to [README](#) to get the source code of Intel® Software Guard Extensions prebuild Architecture Enclaves

Version 2.15.100.3

- Upgraded Intel® Integrated Performance Primitives (IPP) Cryptography library to version 2021 update 3
- Upgraded Intel® SGX Architecture Enclaves based on new IPP crypto library
- Added support in Intel® Quote Provider Library (QPL) to retrieve SGX ECDSA quote verification endorsements from Intel® Provisioning Certificate Service (PCS). User can configure PCCS or PCS in QPL's config file

- Updated SGX ECDSA quote verification library (QVL) and quote verification enclave (QvE) to support CRL in different encoding
- Updated SGX ECDSA quote verification library (QVL) and quote verification enclave (QvE) to hardcode Intel® root public key instead of root certificate
- Fixed bugs

Version 2.14.100.2

- Supported loading enclave at address 0
- Upgraded Intel® Quote Verification Enclave to integrate SgxSSL/OpenSSL version 1.1.1k
- Updated the DCAP driver V1.33 with stability fixes, released as V1.33.2. This is to support legacy solutions not ready to transition to the latest DCAP driver V1.41 or kernel 5.11+
- Fixed bugs

SGX support has been built in mainline kernels since release 5.11. To avoid future incompatibility issues, it is strongly recommended for solutions using the DCAP driver to transition to use kernel 5.11 or above.

Version 2.13.3

- Upgraded Intel® Integrated Performance Primitives (IPP) Cryptography library to version 2020 update 3
- Upgraded Intel® SGX Architecture Enclaves based on new IPP crypto library

This is the final release that will support Ubuntu 16.04 LTS. The next release of this software will not include pre-built packages for Ubuntu 16.04 LTS aligning with Ubuntu's LTS release Standard Support policy

Version 2.13.100

- Added more log information in PSW components to help identifying possible issues
- Upgraded OpenSSL and SgxSSL to latest version 1.1.1i in DCAP components
- Added data base migration support in PCCS
- Fixed bugs

Version 2.12.100

- Added Ubuntu 20.04 and CentOS 8.2 support
- Added Intel® Provisioning Certification Service V3 API support for ECDSA attestation
- Fixed bugs

Version 2.11.100

- Supported Red Hat Enterprise Linux 8.2 and CentOS 8.2
- Provided standalone Intel® SGX DCAP Quote verification library installer
- Added Intel® SGX DCAP Platform Certificate ID Retrieval Tool and Multi-package Registration Agent (MPA) installers into SGX installation repo.
- Fixed bugs

Version 2.10.100

- Supported Fedora 31, CentOS 8.1 and Red Hat Enterprise Linux 8.1.
- Supported user to specify platform id in PCK Cert ID Retrieval Tool's command line option.
- Added ability to execute Platform Cert ID Retrieval Tool on multi-package platforms without loading enclaves. PCCS now supports this functionality. The platform still needs to support SGX.
- Updated Platform Cert ID Retrieval Tool and Multi-package registration tool to align with BIOS platform manifest changes.
- Added .deb and .rpm installers for Platform Cert ID Retrieval Tool and Multi-package Registration Agent.
- Fixed bugs.

Version 2.9.101

- Supported to query Intel® SGX attestation key ID list
- Provided Intel® SGX Data Center Attestation Primitive (DCAP) driver to support ECDSA attestation on platforms which support Intel® SGX Flexible Launch Control.
 - Please note this new DCAP driver does not support Intel® SGX EDMM feature.
 - This DCAP driver is in addition to the existing SGX driver (Out of Tree driver) which is still provided in the download point, side by side.
 - So now there are two drivers in the download repo and user should and only needs to install one of the two drivers.
 - Please refer to [Intel SGX Installation Guide for Linux OS.pdf](#)'s "Intel® SGX Driver Installation" section to know when to use and know how to install Intel® SGX DCAP driver.
- Fixed bugs.

Version 2.9.100

- Changes to address CVE-2020-0551.
- Fixed bugs.

Version 2.8.100

- Added support for modularized installation.
- Added support for running SGX applications inside Docker containers.
- Fixed bugs.

Version 2.7.101

- Fixed bugs.

Version 2.7.100

- Added support for new version Intel® Provisioning Certification Server interfaces.
- Added new libraries libsgx_epid.so, libsgx_launch.so, libsgx_platform.so and libsgx_quote_ex.so.
- Removed Intel® SGX Platform Service Operation and Provisioning bundles. As a result, tae_service library API and sgx_report_attestation_status() API would return error code which indicates the service is unavailable.
- Fixed bugs.

Version 2.6.100

- Added support for both EPID and ECDSA-based quote for quoting related interfaces in sgx_uae_service library.
- Updated key exchange library to support both EPID and ECDSA-based remote attestation.
- Added support for a new interface to check platform information blob from remote attestation response message.
- Fixed bugs.

Version 2.5.100

- Added support for ECDSA quote based remote attestation.
- Fixed bugs.

Version 2.4.100.48163

- Supported Intel® SGX Enclave Common Loader library
- Updated Intel® Architecture Enclaves to use Intel® IPP Cryptography 2019 Update 1 library
- Fixed bugs

Version 2.3.100.46354

- Added support for Ubuntu* 18.04 LTS 64-bit Desktop and Server version
- Updated the Intel® SGX PSW installer for Ubuntu*. The following changes are introduced:
 - Using .deb installer
 - Using name `libsgx-enclave-common_{version string}-1_amd64.deb`.
 - Installing the Intel® SGX Enclave Common loader library.
- Fixed SGX Quoting enclave bug, which caused the invalid signature error when a user upgraded the SGX PSW 1.6 version to a higher version and did remote attestation
- Updated the SGX Provisioning Cert Enclave to fix error code bug
- Fixed bugs.

Version 2.2.100.45311

- Added support for Switchless Calls, a new mode of operation to perform calls from/to SGX enclaves
- Fixed bugs.

Version 2.1.103.44322

- Updated the cryptography lib to the Intel® Integrated Performance Primitives Cryptography 2018 Update 2.1. Mitigated security vulnerability CVE-2018-3617(<https://cve.mitre.org/cgi-bin/cvename.cgi?name=2018-3617>). For more details, refer to Intel Security Advisory INTEL-SA-00106(<https://security-center.intel.com/advisory.aspx?intelid=INTEL-SA-00106&languageid=en-fr><https://www.intel.com/content/www/us/en/security-center/default.html?intelid=INTEL-SA-00106&languageid=en-fr>) and INTEL-SA-00135(<https://security-center.intel.com/advisory.aspx?intelid=INTEL-SA-00135&languageid=en-fr>).
- Updated the Intel® SGX platform service Dal applet.
- Fixed bugs.

Version 2.1.102.43402

- Mitigated security vulnerability CVE-2018-3689 (<https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2018-3689>). For more details, refer to Security Advisory INTEL-OSS-10004 (<https://01.org/security/advisories/intel-oss-10004>)
- Mitigated security vulnerability CVE-2018-3626 (<https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2018-3626>). For more details, refer to Security Advisory INTEL-SA-00117 (<https://security-center.intel.com/advisory.aspx?intelid=INTEL-SA-00117&languageid=en-fr>).

Version 2.1.101.42529

- Updated security to the Intel® SGX PSW.

Version 2.1.100.42002

- Added support for CentOS* 7.4
- Added support for SUSE* Linux Enterprise Server 12
- Fixed bugs.

Version 2.0.100.40905

- Added support for 3072 bit Intel® SGX provisioning server public key
- Added support for the Intel® SGX Enclave Dynamic Memory Management (EDMM)
- Added support for Red Hat* Enterprise Linux* Server 7.4.

Version 1.9.100.39124

- Fixed bugs.

Version 1.8.100.37689

- Added support for the Trusted Platform Service
- Added support for RedHat* and CentOS*.

System Requirements

Hardware Requirements

- 6th Generation Intel® Core™ Processor or newer.

Software Requirements

- Supported Linux* OS distributions:
 - Ubuntu* Server (64-bit): 22.04, 24.04, 26.04 LTS
 - Red Hat Enterprise Linux* Server (64-bit): 9.6, 9.8, 10.0, 10.2
 - CentOS* Stream (64-bit): 9, 10
 - SUSE Linux Enterprise Server* (64-bit): 15 SP7, 16
 - Anolis* OS (64-bit): 8.10
 - Azure* Linux (64-bit): 3.0
 - Debian* (64-bit): 10, 12, 13

Note:

1. Intel® SGX PSW supports the Intel® Xeon® Processor E3 Server V5 and onwards platforms if the platform processor and BIOS support the Intel® SGX. Please check with OEM/ODM regarding BIOS support for enabling the Intel® SGX.
2. Intel® SGX platform service is not supported on the Intel® Xeon® Processor E3 Server and onwards platforms.

Known Issues and Limitations

- N/A

Disclaimer and Legal Information

No license (express or implied, by estoppel or otherwise) to any intellectual property rights is granted by this document.

Intel disclaims all express and implied warranties, including without limitation, the implied warranties of merchantability, fitness for a particular purpose, and non-infringement, as well as any warranty arising from course of performance, course of dealing, or usage in trade.

This document contains information on products, services and/or processes in development. All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest forecast, schedule, specifications and roadmaps.

The products and services described may contain defects or errors known as errata which may cause deviations from published specifications. Current characterized errata are available on request.

Intel technologies features and benefits depend on system configuration and may require enabled hardware, software or service activation. Learn more at Intel.com, or from the OEM or retailer.

This software and the related documents are provided as is, with no express or implied warranties, other than those that are expressly stated in the License.

Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.
